20-year totals

	PAXSEAL	REACTIVE	SAVINGS
PaxSeal fees	\$126K	—	-\$126K
Repairs paid by owner	\$56K	\$415K	+\$359K
Expected storm damage	\$10K	\$14K	+\$4K
Roof replacements	\$379K	\$331K	-\$48K
Cash spending	\$571K	\$760K	+\$189K
Current roof value used	\$139K	\$139K	—
Roof life left at year 20	-\$115K	-\$31K	+\$84K
Net 20-year cost	\$594K	\$868K	+\$274K

What this means

- 1 A later replacement. The next new roof moves from year 8 to year 11, leaving 10 years of roof life at year 20 instead of 2.
- 2 Smaller repairs. Emergency repairs run about 3.8× the planned rate in an apartment property, and the PaxSeal fee covers half of planned repairs. Together that saves \$359K.
- 3 Fewer unit turns. A leak into an apartment means displaced residents, mold risk and lost rent. Early repairs keep units occupied.
- 4 The program pays for itself. Each \$1 of fees avoids about \$2.50 of other cash roof costs.

Thunderstorm wind / derecho, snow load

About 3–4 major regional roof-damaging events per 20 years, such as the 2010 snowstorms, the 2012 derecho and the 2016 blizzard. Expected storm damage to this roof over 20 years is **\$10K** if maintained and **\$14K** with reactive repair only, before insurance. A documented maintenance history also helps when an insurer reviews a claim.

Estimates, not a quote. Projections from Laurel market research and industry data, in nominal dollars. The PaxSeal fee is an estimate; your proposal states the actual price. Net cost includes wear on the current roof, less roof life left at year 20; both roof-value figures are in today's dollars. Storm damage is before insurance. Property value is the yearly gain in net operating income divided by the cap rate, for income property where the owner pays for the roof.
