

Roof Lifecycle Cost Analysis

Planned maintenance is projected to save the owner of a typical San Antonio apartment property **\$838K** over the next 20 years.

That is 64.5% less than the reactive cost, or \$367K in today's dollars. It compares PaxSeal planned maintenance with fixing problems only after they leak, using San Antonio costs and storm history.

MARKET	PROPERTY	ROOF AREA	SYSTEM	AGE	NEW ROOF TODAY
San Antonio	Multi-Family	30,000 sq ft	TPO	8 yrs Good	\$405K

PAXSEAL NET COST

\$461K

\$909K spent, less \$448K roof life left

REACTIVE NET COST

\$1.3M

\$1.37M spent, less \$66K roof life left

VALUE PROTECTED

\$373K

\$22K/yr more NOI at a 6.0% cap rate

NEW ROOF PRICE

2× in 15 yrs

\$405K today, \$996K by year 20

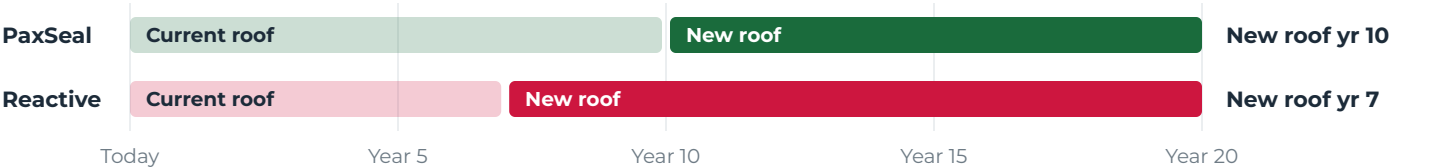

Cumulative roof spending, next 20 years

Nominal dollars. Vertical jumps are full roof replacements.

Roof life

When each scenario needs a new roof.

Where the savings come from

20-year totals

	PAXSEAL	REACTIVE	SAVINGS
PaxSeal program fees	\$126K	—	-\$126K
Repairs paid by owner	\$97K	\$734K	+\$637K
Expected storm damage	\$51K	\$76K	+\$25K
Roof replacements	\$635K	\$555K	-\$80K
Credit for roof life left	-\$448K	-\$66K	+\$382K
Net 20-year cost	\$461K	\$1.3M	+\$838K

What this means

- 1

A later replacement. Maintenance moves the next new roof from year 7 to year 10, so fewer roofs are bought over the period.
- 2

Smaller repairs. Problems found on a scheduled visit avoid emergency work, which costs about 3× as much. That saves \$637K in repairs.
- 3

Fewer unit turns. A leak into an apartment means displaced residents, mold risk and lost rent. Catching roof problems early keeps units occupied.
- 4

The program pays for itself. Each \$1 of PaxSeal fees returns about \$6.63 in avoided cost.

Local risk profile

Bexar County, TX (48029)

Hail and tornado

Baseball-size hail somewhere in Bexar County about once every 3 years (NOAA); April 2016 storm ≈ \$1.4B damage. Expected storm damage to this roof over 20 years is **\$51K** if maintained and **\$76K** if neglected. A documented maintenance history also helps when an insurer questions a claim.

Hail	Very High	■■■■■
Strong wind	High	■■■■■
Tornado	Very High	■■■■■
Hurricane	Moderate	■■■■■
Winter weather	High	■■■■■
Ice storm	Moderate	■■■■■

Key assumptions

Confidence reflects source strength. Values will be refined as research continues.

ASSUMPTION	VALUE	BASIS	CONFIDENCE
Roof life	20 / 15 yrs	Maintained / reactive. Fannie Mae service-life tables; +5 yrs from NRC Canada roof study and manufacturer warranty terms	MEDIUM
Roof cost growth	4.6%/yr	BLS Producer Price Index, nonresidential roofing contractors, 2007–2025	HIGH
Replacement cost	\$13.50/sq ft	San Antonio contractor price ranges	LOW
Reactive repair cost	3× planned	Industry estimates; no primary study found	LOW
Storm damage	0.38%/yr	Of roof cost. FEMA NRI expected annual building loss from hail, wind, tornado, hurricane and winter weather	MEDIUM
PaxSeal fee	\$4,700/yr	Estimate from maintenance-program pricing benchmarks	LOW
Leak consequences	1.25× warehouse	Scales reactive repair costs. Order supported by school-closure, hospital infection-control and insurer water-damage evidence; exact values are estimates	LOW
Cap rate	6.0%	San Antonio multi-family market reports	MEDIUM

Estimates, not a quote. Projections use San Antonio market research and industry data, in nominal dollars; actual costs will differ. The PaxSeal fee is an estimate and your proposal will state the actual price. Net cost credits the roof life remaining at year 20. Property value is the yearly gain in net operating income divided by the cap rate, and applies to income-producing property where the owner pays for the roof.
