

Roof Lifecycle Cost Analysis

Planned maintenance is projected to save the owner of a typical Culbertson (N. Virginia) medical facility **\$1.23M** over the next 20 years.

That is 65.1% less than the reactive cost, or \$537K in today's dollars. It compares PaxSeal planned maintenance with fixing problems only after they leak, using Culbertson (N. Virginia) costs and storm history.

MARKET	PROPERTY	ROOF AREA	SYSTEM	AGE	NEW ROOF TODAY
Culbertson (N. Virginia)	Medical	60,000 sq ft	Mod bit	8 yrs Good	\$570K

PAXSEAL NET COST

\$660K

\$1.29M spent, less \$631K roof life left

REACTIVE NET COST

\$1.89M

\$1.98M spent, less \$93K roof life left

EMERGENCY COSTS CUT

\$1.03M

Unbudgeted repairs and storm damage avoided; \$5.32 back per fee dollar

NEW ROOF PRICE

2× in 15 yrs

\$570K today, \$1.4M by year 20

Cumulative roof spending, next 20 years

Nominal dollars. Vertical jumps are full roof replacements.

With PaxSeal Reactive Price of a new roof that year Money kept by maintaining

Where the savings come from

20-year totals

	PAXSEAL	REACTIVE	SAVINGS
PaxSeal program fees	\$231K	—	-\$231K
Repairs paid by owner	\$137K	\$1.16M	+\$1.02M
Expected storm damage	\$29K	\$43K	+\$14K
Roof replacements	\$894K	\$781K	-\$113K
Credit for roof life left	-\$631K	-\$93K	+\$537K
Net 20-year cost	\$660K	\$1.89M	+\$1.23M

What this means

- 1 **A later replacement.** Maintenance moves the next new roof from year 7 to year 10, so fewer roofs are bought over the period.
- 2 **Smaller repairs.** Problems found on a scheduled visit avoid emergency work, which costs about 3× as much. That saves \$1.02M in repairs.
- 3 **Operations keep running.** A leak in a clinical area triggers infection-control work, closes rooms and can damage equipment. Planned care keeps the roof from interrupting patient care.
- 4 **The program pays for itself.** Each \$1 of PaxSeal fees returns about \$5.32 in avoided cost.

Local risk profile

Prince William County, VA (51153)

Thunderstorm wind / derecho, snow and ice

Strong wind and winter weather both rated Relatively High (FEMA NRI); tropical remnants ~1 per 12 years. Expected storm damage to this roof over 20 years is **\$29K** if maintained and **\$43K** if neglected. A documented maintenance history also helps when an insurer questions a claim.

Hail	Moderate	■■■■■
Strong wind	High	■■■■■
Tornado	Moderate	■■■■■
Hurricane	Moderate	■■■■■
Winter weather	High	■■■■■
Ice storm	Low	■■■■■

FEMA National Risk Index rating

Key assumptions

Confidence reflects source strength. Values will be refined as research continues.

ASSUMPTION	VALUE	BASIS	CONFIDENCE
Roof life	20 / 15 yrs	Maintained / reactive. Fannie Mae service-life tables; +5 yrs from NRC Canada roof study and manufacturer warranty terms	MEDIUM
Roof cost growth	4.6%/yr	BLS Producer Price Index, nonresidential roofing contractors, 2007–2025	HIGH
Replacement cost	\$9.50/sq ft	Culbertson (N. Virginia) contractor price ranges	LOW
Reactive repair cost	3× planned	Industry estimates; no primary study found	LOW
Storm damage	0.15%/yr	Of roof cost. FEMA NRI expected annual building loss from hail, wind, tornado, hurricane and winter weather	MEDIUM
PaxSeal fee	\$8,600/yr	PAX program estimate for this roof size. Your proposal will state the actual fee	ESTIMATE
Leak consequences	1.40× warehouse	Scales reactive repair costs. Order supported by school-closure, hospital infection-control and insurer water-damage evidence; exact values are estimates	LOW

Estimates, not a quote. Projections use Culbertson (N. Virginia) market research and industry data, in nominal dollars; actual costs will differ. The PaxSeal fee is an estimate and your proposal will state the actual price. Net cost credits the roof life remaining at year 20.
