What this means

1. **A later replacement.** The next new roof moves from year 8 to year 11, leaving 10 years of roof life at year 20 instead of 2.
2. **Smaller repairs.** Emergency repairs run about 3.8× the planned rate in an apartment property, and the PaxSeal fee covers half of planned repairs. Together that saves $419K.
3. **Fewer unit turns.** A leak into an apartment means displaced residents, mold risk and lost rent. Early repairs keep units occupied.
4. **The program pays for itself.** Each $1 of fees avoids about $2.93 of other cash roof costs.

Thunderstorm wind / derecho, snow and ice

Strong wind and winter weather are both rated Relatively High by FEMA, and tropical storm remnants arrive about once every 12 years. Expected storm damage to this roof over 20 years is **$14K** if maintained and **$20K** with reactive repair only, before insurance. A documented maintenance history also helps when an insurer reviews a claim.

Estimates, not a quote. Projections from Culbertson (N. Virginia) market research and industry data, in nominal dollars. The PaxSeal fee is an estimate; your proposal states the actual price. Net cost includes wear on the current roof, less roof life left at year 20; both roof-value figures are in today's dollars. Storm damage is before insurance. Property value is the yearly gain in net operating income divided by the cap rate, for income property where the owner pays for the roof.
